Abstract:- Entrepreneurship is an important element for economic stability in the country this can only be achieved through accessing quality education among adult learners who would becomes the future Entrepreneurs, Economist and administrative leaders in the world. This paper investigated on Adult learners’ perception on entrepreneurship education in adult literacy centers within Sokoto metropolis for economic stability in Nigeria. The study employed descriptive survey design and the sample size of 264 respondents were selected representing the total population of 700 adult learners with the help of R.V.Krejcie and D.W.Morgan (1970) table of selecting samples from population. Questionnaires’ was used to collect data from the respondents. The data collected were analyzed using frequency and percentage with the help of SPSS version 20 the research findings shows that, the adult learners had Key interest on entrepreneurship education. Therefore, it was recommended that, entrepreneurship education should be encouraged to enable adult learners identify more functional aspect of their curricular and have more positive attitudes on entrepreneurship Education for Economic Stability.

Key words: Entrepreneurship, Adult Learners and Economic Stability

I. INTRODUCTION

Nigeria was bless with numerous natural resources of different kinds ranging from materials and human resources, yet our economy is not doing well as a result of economic instability and entrepreneurship development. The economy is stagnant resulting to in ability of the people to involve into entrepreneurship activities that will make them self reliant and dependant. (Ogundele, 2006) entrepreneurship can be explained as the process of emergence Behavior and performance of entrepreneur through acquiring skills. He noted that a focus on entrepreneur is a focus on the processes involve in the initiation of new organization, the behavior of such organization and its performance in term of profit made in line with the statement made by (Osuagwu, 2002) entrepreneurship is a catalyst to increase the rate of economic growth creating Jobs opportunities as well as reducing the dependence on the import of manufactured. The entrepreneurship is a process under taking by government to reduce the level of poverty in the society. It also consist the creation and innovation of new ideas to promote new sets of attitudes and culture for the Attainment of future challenge (Arogundade, 2011)

The multilateral agencies and industrialized countries perceived entrepreneurship and MSMES as offering Africa the golden opportunities of engendering socio-economic transformation. to be sure, majority of African scholars and policy makers have embraced the idea that entrepreneurship and MSMES would accelerate economic growth. This would help to achieve the broader policy objectives of expanded economic opportunities, job creation and poverty alleviation in the region (Aladekomo, 2004: Chukuwemeka, 2011)

The writers, look at the above statement made by the scholars and opined that entrepreneur education aim at the process of enhancing entrepreneurial, skills and knowledge through structured training and institutional building programs focused on Adult learners who wishes to start or expand a business, On the other side (Benzin 2009) he looked at entrepreneurship education as an involvement of the three (3) types of related Activities that stimulate, support and sustainable the practice of entrepreneurship. In line with the statement made by (sahlman and Stevenson 1991) entrepreneurship is a way of managing all that involves pursuing opportunities without regard to resources currently controlled. Entrepreneurship in mind of learners’ right from secondary level, unfortunately many adult learners are still attached to the traditional belief of education for government work, the same mentally that misled millions of Nigerians to jobless cadre. The consequences of this ugly situation would only result to over dependent on little available opportunities, high rate of unemployment, social crimes, over dependent on foreign products, stagnant economic growth, and low standard of living and lack of attainment of Economic Stability in the country. It was against this background that the researchers investigated on the adult learners’ perception on entrepreneurship in adult literacy centers in Sokoto metropolis.

Theoretical framework

This research was build based on the following theories that are more relevant to the perception of adult learners on entrepreneurship education, the theory of achievement is one of the most applied on entrepreneurship, it was initiated by Mc Clelland (1961) individuals with strong need for achievement demonstration of higher performance in
challenging task and innovation, it looks for better way to improve their higher performances, (Litten 2000; Utsch & Ferreira 2008) Mc Clelland theory stated that a business required people who took moderate risks, assumed personnel responsibilities, new products or services, people with high needs for achievement and motivation were found with those related features’ (Raposo, and Ferreira 2008) Therefore McClellands theory depicted an ideal type of entrepreneurial personality which included the needs of achievement affiliation power.

Another theory that best backed the entrepreneurship intention of the people are been formed by (Shapero 1982; Krueger 1993) called theory of planned behavior and achievement, the theory stated that entrepreneurial intention stemmed from the perception of feasibility and desirability of a person and this path was affected by the cultural and social context. This has really shows attitudes towards behavior and perceived behavior control, which are effected by subjective norms and resulted in social pressure to perform the behavior (Tukur, 2009)

Statement of the Problems

Ninety percent of Nigerians believed in white collar job rather than been job creators or becoming independents and contribute to national development. despite sensitizations from government and nongovernmental organizations, Nigerians expectation had being what Nation upper for them not what they can upper to the Nation in terms of (GDP) Gross Development products or Any meaningful development in the country. The current higher rates of unemployment and survival of the fittest in the country have stated changing the thinking of many adult-learners on entrepreneurship education. It was against this background that the researchers however, investigated on the willingness of adult-learners to participate in entrepreneurship after completion of their Programmes.

Therefore, the thinking of adult learners has to be shape in order for more economic problems not to be occurred in future, hence forth that the above theories categorically explained how real life situations currently affecting these adult learners concerning entrepreneurship.

Objective of the Study

1) To examine the attitudes of adult-learners on entrepreneurship Education

Research Questions

1) What are the attitudes of Adult-learners on Entrepreneurship?

II. RESEARCH METHODOLOGY

The research adopt descriptive survey design in order together information from various respondents and various centers in Sokoto Metropolis the choice of this research design was suitable and consider appropriate because of its advantages of ascertaining the attributes of a large population from a group of individuals. As far as this research is concern the entire adult literacy centers form the population of the study regardless of level.

Population of the Study

The population of the study is relatively large in size since it consist all final year students of four different Adult Literacy centers in Tudun Wada, Gidan Haki, Women Center for Continue Education and Prison Center for Continue Education with total number of about 700 Adult Learners.

Sample Size

A sample of the study consisted of all the four Adult literacy centers in sokoto metropolis. The sample size of the study was determined based on Morgan & kreyce (1970). Adult Learners (700) the participants selected were in a better position to describe the perception of Adult Learners on Entrepreneurship education in Adult Literacy Centers in Sokoto Metropolis. From Adult Learners population of 700 only 264 were selected in number the selection was based from the 4 Literacy Centers listed above.

Therefore, the total numbers of the population were 700 and sample size was 264, from the whole number of the population. Simple random sampling was used to select the participants from these particular Four Centers in order to give equal opportunity to population in participation. The summary was given below. For simple random sampling, the researcher wrote names of Adult Learners in their respective Centers on pieces of paper, which were folded, put in a box and mixed together. A paper was picked at random by selected Adult Learner’s without replacement till the required number was reached.

Data Collection Instrument and Method

Closed ended Questionnaires were used to gather information from the selected sample of Centers which helped the researchers analyze the data and made generalizations. The items of the instrument (Questionnaires’) were adequately checked and validated by the experts in Department of Adult Education, Curriculum and Department of Psychology to ensure Content Validity the content validity index (CVI) was computed as below.

$$CVI = \frac{n}{N}$$; where n is the number of items which was declared relevant; N is the total number of items in the instrument.
CVI= Agreed items by judges as suitable \[ = \frac{31}{36} = 0.861 \]

For the instrument to be accepted as valid, average index should be 0.7 or above (Amin, 2005). Therefore, since computed values was 0.861 which was greater than 0.7, the instrument was considered valid.

Reliability
The Reliability determines whether the research instrument is reliable and consistence. Therefore, it can be adopted for collection of data (Kaplan & saccuzo, 1999). A pilot test was conducted where a tenth of the questionnaires were given to some Adult Learners, who are not among the participants of this study. The data collected was tested by the used of split half reliability method, the researcher gave 20 copies of the instrument within the population which will not be put on the final sample. After the administering, the researcher divides the instrument into two equal halve of odd and even numbers this was correlated using Cronbach alpha in the SPSS soft ware version 20. The result was presented in tabular format.

</thead>
<tbody>
<tr>
<td>0.934</td>
<td>36</td>
</tr>
</tbody>
</table>

Source: Result of Analysis (2020)

For the instrument to be accepted as reliable, average index should be 0.7 or above Amin (2005). Therefore, since computed values were greater than 0.7 i.e. 0.934, the instrument was considered reliable. For the analysis of data collected, Frequencies and percentage were used to answer research questions with the Help of SPSS Package Version 20.

III. RESULT
What is the Attitudes of Adult Learner in Adult Literacy Centers on Entrepreneurship?

</table>

Sources: Field data 2020

Table 3.1 Indicate that Adult Learners positive Attitude towards entrepreneurship after completing their Programs, Considering the Result of the items analyses using frequencies and percentage. For instance, Entrepreneurship is a best career choice, shows that 247 respondent which amounted to 92 % agree with the item out of 264 returned scales. I prepare to be self employed than depend on gov’t shows that 239 respondents were with the item which amounted to 91 % and only 25 respondent disagree with the statement which amount to only 9% I will start business upon completion of my program. The Result revealed that, 210 respondent agree with the statement which constitute 79 % similar percentage from item 4 and 9; I’m ready to take risk as an entrepreneur and most people that made it in life are self employed.

More over 217 respondents believed that they have bigger income as self reliant than been paid by employer at item 10 with about 83 % against 17 % disagreement with the item.

Therefore, the above analyzed items signified that Adult learners Shows their Willingness of Shift from idea of dependent to the idea of self reliance which will bring about sustainability in life.

Discussion of the Result
From the analysis of the data generated in this study, it was confirmed that Adult Learners in Literacy Centers in Sokoto Metropolis have positive entrepreneurship Ideas. This positive Idea helps in Selecting and Concentrating on Courses that will match to their entrepreneur. The finding is relevant with the Jumaat, Ishak & Salehuddin (2001) conducted Research at a local youth skills Development institute also found a strong positive relationship between the types of Entrepreneurial Courses and entrepreneurial interest (Yusuf, 2008).

While the result of item no-6 where Adult Learners prepare to be job creators concord with, outcomes of utara university Malaysia, it shows that 75 % has desire of becoming self employed programs organized by the university ( Lope pihie & sana 2009) the finding on item no-3 shows Entrepreneur is the best way of becoming Rich it was in line with the study conducted by (Rangia 2003) the study was empirical which revealed that individuals who are ready and willing to be independents, takes Risk of Business are ready to becomes Entrepreneurs.

IV. CONCLUSION
Given the results as obtained, analyzed and interpreted, the researcher concludes that: Adult Learners in Literacy Centers in Sokoto Metropolis have key Interest on Entrepreneurship skills which would Leads to Job creation, Independency, Self-Employment and development in Economic stability.

Recommendation
I. Entrepreneurship education should be encouraged to enable adult learners identify more functional aspect
of their curricular and have more positive attitudes on entrepreneurship Education.

II. Government Should Encourage Entrepreneurship Programmes in Adults Literacy Centers in the State at large.

III. Educational policy Makers Should ensure Entrepreneurship Education are Included in Educational Curriculums right from Primary Schools up Tertiary Institutions.

Areas for Further Research

The researchers recommend that further studies be conducted in the same area with special focus on the following:

1. A similar study shall be conducted in other States in Nigeria to determine if the Perception of Adults Learners on Entrepreneurship is statistically significant in other Adult Literacy Centers, as perceived by Adult learners in Sokoto Metroplis.
